

Please amend the claims as follows:

1. (Amended) An apparatus for displaying local time information, comprising:
means for storing Greenwich mean time (GMT) information for each of a plurality of cities;
means for acquiring [setting] a reference time from a signal received from a remote system;
means for counting a duration of time that elapses from when said reference time is set;
means for selecting at least one of said plurality of cities and calculating a local time of said selected city, said local time being based on a difference between the GMT of said selected city and the GMT of a present location of said apparatus, said reference time and said elapsed time; and
means for outputting said local time.

6. (Amended) In an apparatus having a display and a memory for storing Greenwich mean time (GMT) information for each of a plurality of cities, a method for generating local time information, comprising the steps of:

acquiring [setting] a reference time from a signal received from a remote system;
counting a time which elapses from said setting of said reference time;
selecting at least one of said plurality of cities;
calculating a local time of said selected city based on the difference between the
